DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-23, 25, and 27, drawn to a system, a program storage device readable by a system, and/ or a computer data signal embodied in a carrier wave and representing a series of instructions for making a medical care schedule and/or record including a display controlling device for calculating a present position in the table corresponding to the measured present date and time under a condition that a width of one day of the table is converted into 24 hours and generating a second sub display to display a present mark at the calculated position and including a display device for displaying the medical care data in the format of the table together with the condition mark and the present mark on the basis of the main display data, the first sub display data and the second sub display data, classified in class 345, subclass 801.
 - II. Claims 24, 26, and 28, drawn to a system, a program storage device readable by a system, and/ or a computer data signal embodied in a carrier wave and representing a series of instructions for a display controlling device for generating first sub display data to display the selected condition mark superimposed on or at the vicinity of the medical care data corresponding to the selected condition mark in the table, at a

position in the table corresponding to the execution timing of a respective one of the medical care actions under a condition that a width of one day of the table is converted into 24 hours and including a display device for displaying the medical care data in the format of the table together with the condition mark on the basis of the main display data and the first sub display data, classified in class 705, subclass 3. It is noted Group II (claims 24, 26, and 28) lack the "calculating component" found in Group I.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a system where an interface element within the window is sized relative to the window; and invention II has separate utility such as a system for processing medical records and data of a patient. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and/or because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 3626

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
